PERF-IT

YOUR REAL-TIME SINGLE WINDOW

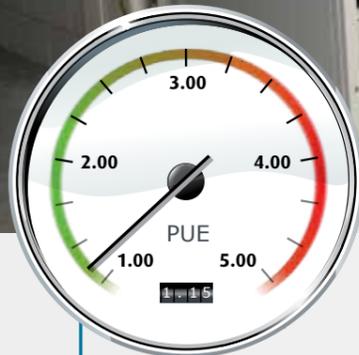

- EFFICIENCY
- ELECTRICAL CAPACITY
- ALARMS
- COOLING CAPACITY

Perf-it

INVOICING BECOMES EASY WITH **PERF-IT**

Each month the financial administration needs an overview of the energy consumption of all racks. Does it also take you too much time to get this done each first of the month? Perf-IT automatically stores and forwards the consumptions to your financial administration

COMPLETE OVERVIEW OF YOUR EFFICIENCY WITH **PERF-IT**

Efficiency and more specific PUE has stimulated the discussions. Often, the PUE is calculated manually and 'corrected' afterwards. With Perf-IT you have a true overview of all KPI's, including PUE, EUE and EER.

OPTIMAL COOLING WITH **PERF-IT**

Next to monitoring, Perf-IT provides a complete control solution for direct free air cooling. By using free air cooling the EER can increase up to 27. Currently, we are able to realize an average PUE below 1.2. We can even provide you with a real-time overview of your decreasing energy use when using our efficiency module.

FULL CAPACITY CONTROL WITH **PERF-IT**

Discover too late that there is no rack space left? Perf-IT provides you with a real-time overview of the available capacities. It is also possible to reserve future expansions. Perf-IT calculates the influences of the expansions on the PDU, busbar, UPS, Transformer and cooling

REGULATED AND OPTIMIZED ALARMS **PERF-IT**

Too many alarms? Our alarm management system supports centralized alarm handling, which leaves the possibility to apply cause en effect suppression. The dynamic priority mechanism permits alarm visibility based on customer, duration and location.

PERF-IT SUPPORTS REAL-TIME OVERVIEW OF YOUR INFRASTRUCTURE, IS OPEN AND INDEPENDENT

We see a constant increase in open DCIM-packets. But do they cover your needs? Are they open? Do they have the possibility to communicate with all your equipment? Are they brand and protocol independent? Can you modify the application yourself or do you need the supplier? Is it based on an industrial backbone and proven technology? For Perf-IT this is all true!
